

POND PRO

North America's Pond Superstore

Born out of Ackenberry Trout Farm, Pond Pro is a family owned business. We have grown from a small pond supply store to a Canadian leader in pond supply, aeration systems, water fountains, and industrial water needs.

Be it designing a unique pond maintenance guide for a customer, offering advice on marketing products, or providing solutions for large scale water systems.

INCLUDED PRODUCTS

- 1 L Green Pond Clarifier
- 0.5 kg Muck Pellets
- 0.5 kg NaturalClear Pond
- 0.5 kg QuikClear
- 0.5 kg Slime Away

APPLICATION RATES & INSTRUCTIONS

DAY 1: Green Pond Clarifier

Use a sprayer to apply the product onto the pond surface or affected areas.

For ponds without fish: Treat 1000 gallons with 570 mL of Green Pond Clarifier every 4 weeks.

$$\text{General rate without fish} = \frac{150 \text{ mL}}{1000 \text{ L}}$$

For ponds with fish: Treat 1000 gallons with a **maximum** of 19 mL of Green Pond Clarifier every 4 weeks

If in doubt of the pond volume, treat conservatively.

⚠ THIS PRODUCT MAY BE HARMFUL TO FISH. DO NOT EXCEED 5 ML OF GREEN POND CLARIFIER PER 1000 L OF WATER WHEN FISH ARE PRESENT.

DAY 2: QuikClear

Apply 110 g to your 1000 gallon pond.

Evenly sprinkle QuikClear over the water surface. For best results, use a skimmer basket or sprinkle it through a waterfall. Ensure that QuikClear is able to circulate through the pond. QuikClear can also be combined with water to create a slurry for easy application.

Water will initially turn a milky white but should be clear by the next day. If desired results are not initially achieved, treatment can be repeated every 3 days.

If fish are present always monitor your pond's pH when using QuikClear. The pH of the water should be between 6.5 & 8.2. Mixing in QuikClear at a higher pH can be toxic to fish. Ensure pH does not fall more than one point a day.

WEAR EYE PROTECTION & A DUST MASK DURING APPLICATION

2. Slime Away

Apply 40 g to your 1000 gallon pond every 4 weeks or as needed.

Sprinkle a thin layer over problem areas. When applying to waterfalls, turn off the pump during application. Wait 15-20 minutes before turning the pump back on. Ensure the pond is well aerated after the treatment.

If fish are present, do not exceed 4 kg per 100 m3 of water. If necessary to treat at this rate, spread treatment over multiple days.

DAY 3: No Treatment

DAY 4: 1. NaturalClear Pond

Apply 1 water soluble packet to your 1000 gallon pond every 2-4 weeks.

Apply at the beginning of the season once the pond is completely ice-free. Toss packets into the water evenly when wind is low. Packets will dissolve and bacteria will be evenly distributed in the water.

2. Muck Pellets

Treat your 1000 gallon pond with 5 tablets every 2-4 weeks.

Easily apply tablets by tossing them in even distribution into the pond. If there are evident sludge areas, apply tablet directly in that area.

Apply a heavy dose at the beginning of treatment to kick-start the process.

Bacteria treatments are not harmful to fish & wildlife. This means precise measuring is not required for NaturalClear Pond or Muck Pellets & you can freely treat your pond at higher application rates with no risk of harm to your pond or aquatic life.
