

NaturalClear Pond & NaturalClear Pond PLUS

CLARIFIES WATER, PREVENTS ODOURS & REDUCES SLUDGE BUILD UP

Our premier bioremediation product, NaturalClear Pond & Pond PLUS, is meticulously crafted to excel in Canada's demanding climate. Developed by our team of expert biologists, this high-performance formula features a diverse blend of bacteria species, ensuring efficacy in various pond, lake, and wastewater environments. Our concentrated blend is specially formulated to thrive in temperatures as low as 3°C, offering resilience and effectiveness in cold conditions. It efficiently reduces COD, BOD, organic carbon, ammonium, nitrates, nitrites, phosphates, hydrocarbons, and produces natural flocculants that aid in clarifying the water.

The bacteria in this product improve water clarity by consuming dead vegetation and sludge buildup. Beyond its cleaning capabilities, NaturalClear also tackles odour issues and reduces nitrate and nitrite levels by converting them into harmless nitrogen gas. This dual-action approach not only enhances water quality but also fosters a healthier environment for aquatic life.

Applications

- Ponds & lakes
- Dugouts
- Golf courses
- Aquaculture
- Irrigation ponds
- Residential developments

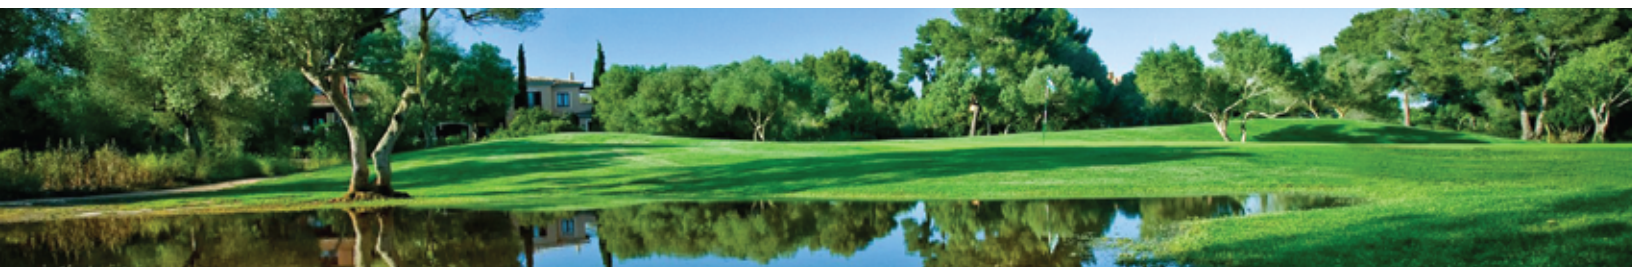

Benefits

- Reduces murkiness, turbidity & clarifies water
- Removes nutrients such as phosphates
- Breaks down organics
- Removes odour
- Reduces sludge & muck build up

Product Features

- Easy to apply
- Small water-soluble packets (wsp) ensure even dispersion of product
- Odour free
- 3 sizes available: 2 kg, 5 kg, 12.5 kg
- Can be used safely around fish, plants, birds, swimming ponds, & other wildlife when used according to label directions

NaturalClear Pond & NaturalClear Pond PLUS

CLARIFIES WATER, PREVENTS ODOURS & REDUCES SLUDGE BUILD UP

Pond or Pond PLUS, which one is right for you?

Pond original formula is sufficient for most ponds! We created the unique Pond PLUS formula to give our reliable formula an extra kick. It has double the bacteria concentration as the original formula! If you have a problem pond or want to really help your pond stay clear and at its peak, we recommend using the Pond PLUS Formula.

NaturalClear Pond: 4 species formula

NaturalClear Pond PLUS: 5 species formula

	TAN/TOC/COD REMOVAL	✓	✓	✓	✓	✓
PHOSPHATE REMOVAL	✓	✓	✓	✓	✓	

Bacteria E is unique to the NaturalClear Pond PLUS formula

Application Instructions

NaturalClear should be applied once the pond is completely ice free with a heavy treatment to kick start the process. Toss packets directly into the water when wind is low. Packets will dissolve and bacteria will be evenly distributed in the water. Maintenance applications should be applied every two weeks.

In general we recommend that maintenance is routinely done from May to September OR as long as the pond remains completely ice free. If the pond has a history of being difficult to manage or growing excessive vegetation, higher application rates can be used safely around fish, plants, birds, swimming ponds, and other wildlife when used according to label directions.

Application Rates

AREA	FIRST TREATMENT (Water Soluble Packets)	MAINTENANCE TREATMENTS (Every 2 weeks)
SMALL PONDS 10' x 10'	2 WSP	1 WSP
1000 M ² ≈ ¼ ACRE	0.5 KG ≈ 20 WSP	0.25 KG ≈ 10 WSP
2000 M ² ≈ ½ ACRE	1 KG ≈ 40 WSP	0.5 KG ≈ 20 WSP
4000 M ² ≈ 1 ACRE	2 KG ≈ 80 WSP	1 KG ≈ 40 WSP

For eutrophic and problem ponds, or for best results: use Pond PLUS at the treatment rates above.
