

# QuikClear Pond Clarifier

TURBIDITY TREATMENT MADE EASY

Pond Pro QuikClear is an easy-to-apply turbidity treatment, formulated to clarify murky water caused by suspended particles and organic material. This product acts as a flocculant to make phosphates unavailable. With aeration, this product continues to effectively make phosphates unavailable and is an easy long-term solution to turbidity.

QuikClear is a powerful solution that effectively clears murky and cloudy water by binding suspended particles together and encouraging them to settle. As a result, the water becomes crystal clear and visually appealing. QuikClear's unique ability to bind particles also makes it highly effective at removing tannins and debris, which can be easily filtered out. Additionally, the binding property of flocculants in QuikClear is highly effective at removing phosphates from water, making it an excellent choice for maintaining a clean and healthy aquatic environment.

## Product Features

- Easy to apply
- Can be used safely around fish, plants, birds, swimming ponds, & other wildlife when used according to label directions
- Economical
- Available as a dry powder  
Available sizes: 1 kg, 5 kg, 10 kg, & 18 kg

## Benefits

- Rapidly clears murky water
- Aids filtration
- Reduces phosphates
- Encourages debris & organics to settle
- Binds & clears dissolved organics

## Applications

- Ponds & lakes
- Dugouts
- Drinking water reservoirs\*
- Aquaculture
- Golf courses
- Residential developments

# QuikClear Pond Clarifier

TURBIDITY TREATMENT MADE EASY

## Application Instructions

### *For Large Ponds:*

Apply 115 kg (250 lbs) of QuikClear per every 1,000,000 gallons (~ 4,000,000 L) of pond water.

### *For Small Ponds:*

Apply 1/2 cup (~ 125 g) of QuikClear per 1000 gallons (3785 L) of pond water.

Powdered flocculant can be sprinkled on the surface or through a waterfall. Ensure the floc is able to circulate through the pond with aeration, waterfalls or circulators. For best results, dilute the powdered flocculant with pond water to create a slurry and evenly apply the final solution around the pond. If needed, repeat the application 24 hours later.

Our application rates are conservative to ensure the safety of aquatic life. If desired results are not initially achieved, treatment can be repeated every 3 days until satisfied with the results.

Water will initially turn a milky white but should be clear by the next day.

## Caution

The pH of water in fish ponds should be between 6.5 & 8.2. Mixing QuikClear with water at a pH of 8.2 or higher can be **TOXIC** to fish. Take precautions and follow instructions when using in fish ponds.

In case of contact with eyes, rinse thoroughly with water for several minutes. Keep rinsing and make sure to contact poison control for further assistance.

Appropriate protective gear, including gloves, safety glasses, and a mask must be worn during application.

Keep out of reach of children.

**Active ingredient: Aluminum Sulphate**
