 **CAMROSE, AB**

 **PONDPRO.CA**

The bottom half of the page features decorative wavy lines in shades of blue and teal, creating a water-like effect.

1 Remove both set screws from the connector plate using a 3/16" hex drive. This will allow the connector plate to move freely up or down on the welded pole, this will be your dock-facing pole.

2 Rotate the connector plate so it is free from the dock facing pole, this will make room for the quick disconnect.

3 Slide the quick disconnect onto the dock-facing pole. Position the quick disconnect at the desired height and tighten firmly using a 9/16" wrench. Confirm that the quick disconnect is secure.

The height of the quick disconnect determines the depth of the circulator in the water. Adjust the height based on the preferred position and operating depth of your circulator.

4 Re-attach the connector plate to the dock facing pole and secure with both set screws.

****The connector plate must be reinstalled at the same height it was originally found.****

5 Slide the quick disconnect into your preferred mount and tighten firmly. Confirm that the quick disconnect and mount are secure.

POND PRO

North America's Pond Superstore

Born out of Ackenberry Trout Farm, Pond Pro is a family owned business. We have grown from a small pond supply store to a Canadian leader in pond supply, aeration systems, water fountains, and industrial water needs.

Be it designing a unique pond maintenance guide for a customer, offering advice on marketing products, or providing solutions for large scale water systems,

OUR TEAM IS HERE TO HELP!
